

# The Mobility Experience

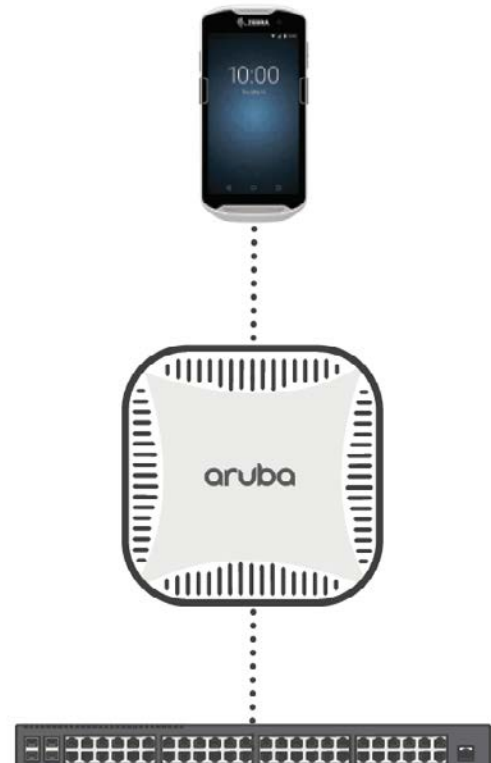

How Do Your Employees and Customers Feel About the Mobile Experience in Your Organization?

Are they frustrated? Is your IT department constantly addressing complaints about Wi-Fi or performance issues? Can employees seamlessly track inventory and process payments efficiently and accurately anywhere? Zebra and Aruba HPE can turn what might be a frustrating experience into an outstanding one. With a mobile-first mentality, you can improve the customer experience and increase workforce performance.

## As Easy as a Smartphone

Today's workers want a device that is every bit as contemporary and easy to use as the smartphone they use every day. You need a device that will last for years, built for all-day, everyday use, with all the features you need to enable your workers to achieve peak productivity. Now you can have it all with the TC51 and TC56 Touch Computers from Zebra. Built for the new business world, you get an industrial design that looks and feel like the most popular pocket-able consumer-style smartphones to improve your employees' productivity.

## The TC51 and TC56 Offer Many Unique Zebra-Only Features:

- Active Edge Touch Zone for one-touch access to the features your workers use the most
- Automatically capture and process entire documents
- Unsurpassed security with Zebra's Mobility Extensions (Mx)
- Zebra's Mobility DNA

## To take advantage and ensure employees are getting the most out of the TC51 and TC56, you need to make sure your network infrastructure can support it.

Too often, networks—even networks that are just a few years old—simply aren't robust or flexible enough to keep up with the demands of a mobile environment. Aruba's 802.11ac wireless access points paired with modern switches improve data throughput, speeds, and reliability while handling more devices simultaneously.

### Controllerless Wi-Fi with Aruba InstantOS

There's no easier way to get enterprise-grade Wi-Fi up and running. HPE Aruba Instant delivers the only controllerless Wi-Fi solution that is easy to set up, and is loaded with security and smarts needed to accelerate your business without breaking your budget.

### Management the Way You Want IT

When it comes to Wi-Fi management, only Aruba offers the flexibility to choose. You can manage your Instant network locally or manage it with a cloud-based or on-site network management platform.

Even guest access to your network can be secure and uncomplicated for you and all of your visitors. Simply create a guest network (SSID) and determine who gets access, how, and what they have access to.

### Business-Critical Networking

Aruba's campus switching portfolio spans the access layer to the core and creates the foundation of the new digital workplace. Aruba's switches integrate seamlessly with the wireless network as well as with Aruba's industry-leading security and network management solutions.
