

Network Configuration Manager

Automated Network Configuration and Change Management

SolarWinds® Network Configuration Manager (NCM) can help save time and improve network reliability and security by managing configurations, changes, and compliance for routers, switches, and other network devices

WHY CHOOSE NETWORK CONFIGURATION MANAGER?

- Network Configuration Manager provides out-of-the-box support for major network device vendors, including Cisco®, Palo Alto Networks®, Juniper®, HP®, Huawei®, F5®, Avaya®, Ruckus®, and more
- NCM enables automated bulk deployment of standardized device configs
- NCM allows you to set up automatic backups of device configurations and roll back to the last known good configurations, if necessary
- NCM will automatically identify IOS® devices with potential vulnerabilities, using the NIST CVE repository service, and provides the tools to manage the investigation, remediation, or waiver of each vulnerability
- NCM audits device configs for NIST FISMA, DISA STIG, HIPAA, DSS PCI compliance, and more
- Built on the Orion® Platform, NCM provides the ability to fully integrate with additional network monitoring modules (network performance monitoring, NetFlow traffic analysis, WAN management, VoIP, device tracking, and IP address management) and systems, storage, and virtualization management, all in a single web console

- NCM lets you choose how to deploy—either on-premises or in the cloud
- Save time identifying out-of-compliance configurations using multi-device baselines—use a single baseline or multiple across your network to monitor the configs critical to you

FEATURES

Network Insight™ for Palo Alto Networks

Gain deeper visibility to complex devices like Cisco ASA firewalls, Cisco Nexus® switches, and now Palo Alto Networks firewalls. Pair with NetFlow Traffic Analyzer (NTA) to view traffic conversations by policy in the context of the NCM Policy Details page.

Flexible Deployment Options With Azure SQL Database

Take charge of your NCM deployment with flexibility to deploy NCM either on-premises or in the cloud with Azure SQL Database or Amazon RDS.

Config-to-Config Diff View

With NCM, you can now see config-to-config diff views in addition to baseline-to-config diff views. Leverage the diff viewer to help quickly identify changes within those configs.

Configuration Change Automation

Get help simplifying and standardizing recurring or complex configuration changes by creating a single vendor-neutral script that can be scheduled and executed on routers, switches, and other network devices from Cisco, Palo Alto Networks, Cisco Nexus, Juniper, HP, Dell®, Brocade®, F5, Aruba®, Ruckus, and more.

Configuration Backup and Restore

Be able to quickly recover from a configuration change or catastrophic device failure by having the latest device configuration archives to restore.

Change Monitoring

Be able to know when a configuration has changed. An alert signals you to trace the change down to the device and allows you to view what specific changes were made.

Change Management and Firmware Upgrades

Be able to prevent mistakes by reviewing and approving proposed changes using integrated change approval workflow. Use role and access permissions to improve delegation and collaboration by controlling who can make changes to devices and configurations. Upgrade Lenovo and Juniper devices with the NCM Firmware Upgrade feature. Use the multi-grouping function to rapidly deploy bulk changes. Up to 100 concurrent upgrades.

Baseline and Configuration Drift

Be able to save time identifying out-of-compliance configurations using multi-device baselines. Use a single baseline or multiple across your network to monitor the configs critical to you and leverage the baseline diff viewer to help quickly identify changes within those configs.

Network Insight for Cisco Nexus

Review interface configs alongside performance metrics—filter, search, and identify config changes for access control lists (ACLs)—and get monitoring and backup for every virtual device context.

Network Insight for Cisco ASA

Gain the ability to: discover security contexts, backup and restore config files, discover, visualize, and audit access control lists, and easily manage firmware upgrades for Cisco ASAs.

Network Insight for Palo Alto Networks

Gain a deeper understanding of policy configurations, policy and interface config snippets, config diff for policies, and policy management for Palo Alto Network firewalls. Combine with NetFlow Traffic Analyzer (NTA) for visibility to traffic conversations by policy in the context of the NCM Policy Details page.

IOS Vulnerability Scanning

Improve network security by automatically identifying IOS vulnerabilities and easily upgrading IOS firmware.

Compliance Assessment and Enforcement

Leverage out-of-the-box compliance assessments and reports for critical security standards like DISA STIG, NIST FISMA, HIPAA, PCI DSS, and more—then use automated remediation scripts to correct violations.

Integration with Network Performance Monitor

See when a configuration in the network service path has changed through integration with NPM's NetPath™ feature. Identify performance or configuration issues on key network devices with the Network Insight for Cisco Nexus, Cisco ASA, and Palo Alto Networks devices.

System Requirements Orion Platform products can be deployed on physical or virtual servers on-premises or in the cloud.

These products can also be deployed via Azure or AWS marketplaces.

ABOUT SOLARWINDS

SolarWinds (NYSE:SWI) is a leading provider of powerful and affordable IT infrastructure management software. Our products give organizations worldwide, regardless of type, size, or IT infrastructure complexity, the power to monitor and manage the performance of their IT environments, whether on-prem, in the cloud, or in hybrid models. We continuously engage with all types of technology professionals—IT operations professionals, DevOps professionals, and managed service providers (MSPs)—to understand the challenges they face maintaining high-performing and highly available IT infrastructures. The insights we gain from engaging with them, in places like our **THWACK** online community, allow us to build products that solve well-understood IT management challenges in ways that technology professionals want them solved. This focus on the user and commitment to excellence in end-to-end hybrid IT performance management has established SolarWinds as a worldwide leader in network management software and MSP solutions.
