

TEGUAR®

RUGGED PANEL MOUNT PCs

from Teguar Computers

What Is a Panel Mount Computer?

A Panel Mount Computer is a computer that can be mounted in one of two ways: a wall mount or a VESA mount. Multiple mounting options provide the user with flexibility.

Teguar Panel PC Features

Wide Range of Operating Temperatures

Teguar Panel PCs can operate in a wide range of temperatures, ranging from 32°F to 122°F and even as high as 140°F by request.

A Variety of Inputs & Outputs

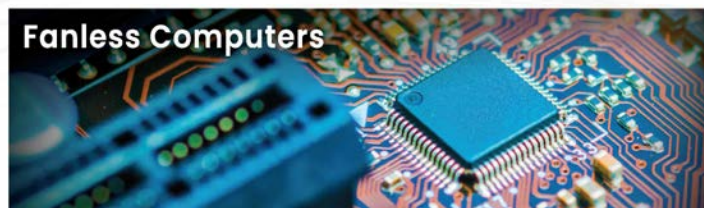

Teguar is familiar with the unique IO needs of industrial clients. We include more LAN and COM ports, and have expansion options to include things like POE, CAN bus, or more USB ports. We can also integrate your unique IO needs through mPCIe ports.

Metal Enclosures

Metal enclosures bump Teguar Computers up to a designation of 'rugged'. Don't use plastic computers in manufacturing environments!

Fanless Computers

Fans are a leading cause of failure in consumer devices used in manufacturing environments. They pull in the particles from the air and deposit them all over your computer, causing it to build up until the unit overheats or corrodes.
