PLAINSIGHT

Production-ready computer vision solutions equip manufacturers with actionable insights for process optimization and risk reduction.

Unlock the value hidden in your visual data to automate operational analytics, eliminate manual workloads, reduce errors, mitigate risks, saving time, cost, and more.

Plainsight helps manufacturers quickly and easily build and deploy vision AI-powered solutions to predict, analyze, and optimize operational performance, resulting in faster production times, enhanced efficiency, and improved products and processes.

See value in days, not months, with high-value vision AI models

Automated Product & Packaging Inspection
Detect and classify defects and distortions like discoloration, mis-attached parts, punctures, and inaccurate labeling and deploy models for proactive and preventive action.

Precision Counting & Tracking
Achieve a higher level of accuracy in your counts and gain greater visibility into the full production cycle with custom object detection modes.

Defect & Foreign Object Detection
Intervene before defective products, malfunctioning equipment, or foreign objects can slow or shut down production or harm your customers.

QA/QC Monitoring & Enforcement
Match visual references, and maintain highest standards of product quality with remote monitoring for real-time insights and defect mitigation.

Real-Time Safety & Productivity Monitoring
Keep facilities safer, more compliant, and productive with models designed to detect PPE, recognize hazards, and stop dangerous behaviors.

Put your visual data to work

Easy Integration
Tap into the value of your existing video cameras and data collection practices to optimize operations and automate reporting.

AI Automation
Remotely and continuously monitor, detect, and correct operational issues before they cause costly delays, recalls, and shutdowns.
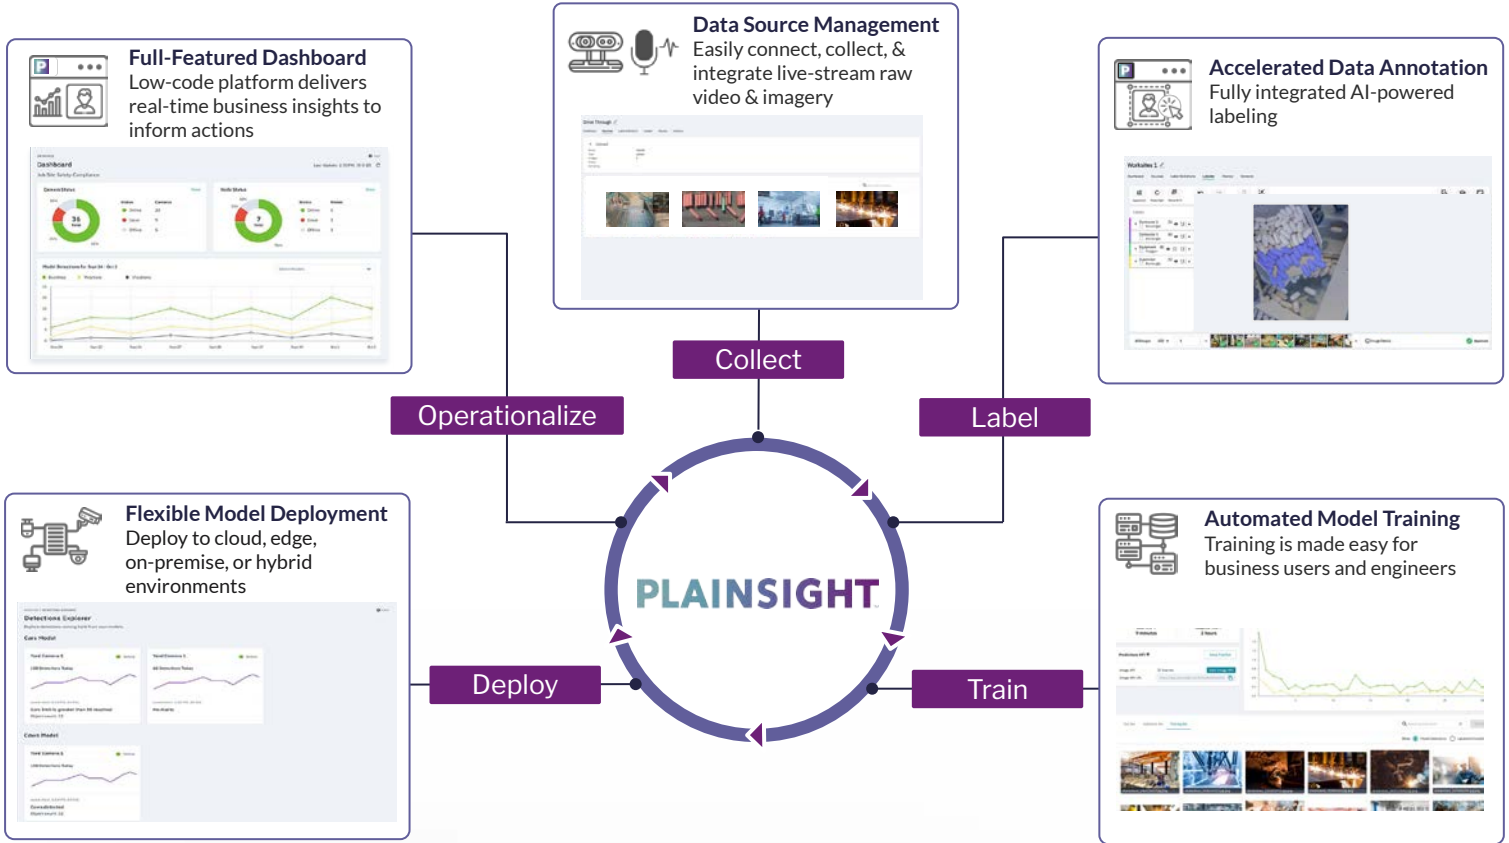

Smarter Decision Making
Improve strategic decisions based on a data-driven source of truth for facilities drawn from reliable, scalable, accurate vision AI.

PLAINSIGHT

Streamline End-to-End Vision AI

Every step of the vision AI lifecycle is made simpler with Plainsight's no-code platform. Integrated features streamline dataset creation, automated machine learning, insights and analysis. Entire teams can now easily collaborate and create problem-specific solutions that provide actionable insights from valuable visual data.

Full-Featured Dashboard
Low-code platform delivers real-time business insights to inform actions

Data Source Management
Easily connect, collect, & integrate live-stream raw video & imagery

Accelerated Data Annotation
Fully integrated AI-powered labeling

Operationalize

Collect

Label

PLAINSIGHT

Flexible Model Deployment
Deploy to cloud, edge, on-premise, or hybrid environments

Automated Model Training
Training is made easy for business users and engineers

Deploy

Train

Plainsight helps the world's most innovative companies realize the potential of their visual data through smart, easy to use, effective vision AI solutions.
