

The Elo Advantage

Enterprise customers require solutions designed for tough environments. Consumer products often fail to deliver on important enterprise features including manageability, lifecycle length, durability, ease of support, warranty, and flexibility. These key features help lower the total cost of ownership during the projects 3-5-year life. While commercial hardware may cost more upfront, you ultimately avoid spending more on enclosure changes, upgrades like sleeves and dongles, field maintenance, OS updates and even full device replacement.

Consumer

COMMERCIAL GRADE HARDWARE

<ul style="list-style-type: none"> ✓ Commercial Mounting ✓ AC Power for fixed location ✓ Commercial Connectivity ✓ Easy Peripheral Integration via Edge Connect 	<p>Not meant for mounting, typically use a "sleeve" based third party encloser.</p> <p>Battery Power - which means it will be plugged in continuously which lessens lifespan and causes battery swelling.</p> <p>Consumer devices generally only have power and audio I/O making it difficult to support third party peripherals.</p>
---	---

PURPOSE BUILT PLATFORM

<ul style="list-style-type: none"> ✓ Commercially hardened locked down operating system ✓ Consistent chipset and image across product family 	<p>Open platform based on consumer use.</p> <p>Chipset, kernel version and image can vary based on production run which means you may end up with a product that your application does not run on.</p>
--	--

MANAGEMENT CAPABILITIES

<ul style="list-style-type: none"> ✓ EloView managed OS and MDM built to work together. ✓ OS updates when (and if) it makes sense for your business 	<p>Requires third party application.</p> <p>It's not uncommon for consumer devices to update unexpectedly and take down your device for a time or not be compatible with your application.</p>
---	--

UNIFIED ARCHITECTURE

- ✓ Elo's common architecture spans across sizes and form factors for seamless device management and application development.
- ✓ With one chipset and managed OS you can easily scale the same experience from 7" - 65" across multiple form factors.
- ✓ Simplifies integration and management for any size enterprise

Consumer electronics organizations work in silos based on form factor and use case meaning a large format display and tablet will run completely different and often require multiple application versions for a consistent experience

LONG PRODUCT LIFECYCLES

- ✓ Product availability 3+ year
- ✓ OS Support 5+ years
- ✓ IT does not need to manage multiple versions of the application

Consumer products often have a product lifecycle of 1 year, which means a commercial program running longer than 1-year will often have different product form-factors and OS versions install to install

SERVICE & SUPPORT

- ✓ Extended warranties up to 5 years
- ✓ Advanced unit replacement
- ✓ On-Site Exchange
- ✓ Accidental damage protection

Most consumer devices come with a 1-year warranty and there is often a clause in the warranty statement that limits the warranty to 90-days if used in a commercial environment if you don't purchase extended warranty coverage
