

How to win at app lifecycle management

Power your way to victory with Omnissa App Volumes

In the game of app lifecycle management, there are many pitfalls that can keep your organization from moving ahead at full velocity. Using traditional methods for app delivery is no longer a winning strategy. These methods inevitably create management complexity, turning routine tasks such as updates, patches, and management of apps and operating systems into overwhelming ordeals—not to mention providing a bad experience and disrupting productivity for your entire organization.

To win at app lifecycle management, you need a truly modern approach. That's where Omnissa App Volumes™ comes in.

Streamline app delivery and management

App Volumes is a real-time app delivery and lifecycle management solution that centrally manages apps deployed to virtual desktops. With App Volumes and Apps on Demand, you can capture apps once and deliver them on demand in a “farm-less” model that reduces infrastructure and maintenance costs, and keeps your organization on the fast path to victory.

Just take a look at how much faster and simpler app lifecycle management is with App Volumes vs. traditional methods.

Oh no! You pushed an app and something went wrong.

Traditional app lifecycle management

Wait 6 hours to reboot the server to avoid possible problems for thousands of employees.
Do not advance.

As you wait to reboot, your entire workspace may be vulnerable to attack.
Move back 1 space.

More apps + more instances = so many servers and more potential problems!
Move back 2 spaces.

Bad news! You've wasted too much time and resources managing and updating unique images with unique versions of apps and settings.
You lose—try again!

App Volumes and Apps on Demand

Luckily, you've got App Volumes. Because the app is separated from the OS, you can rollback easily while you identify and resolve the issue.
Move ahead 6 spaces.

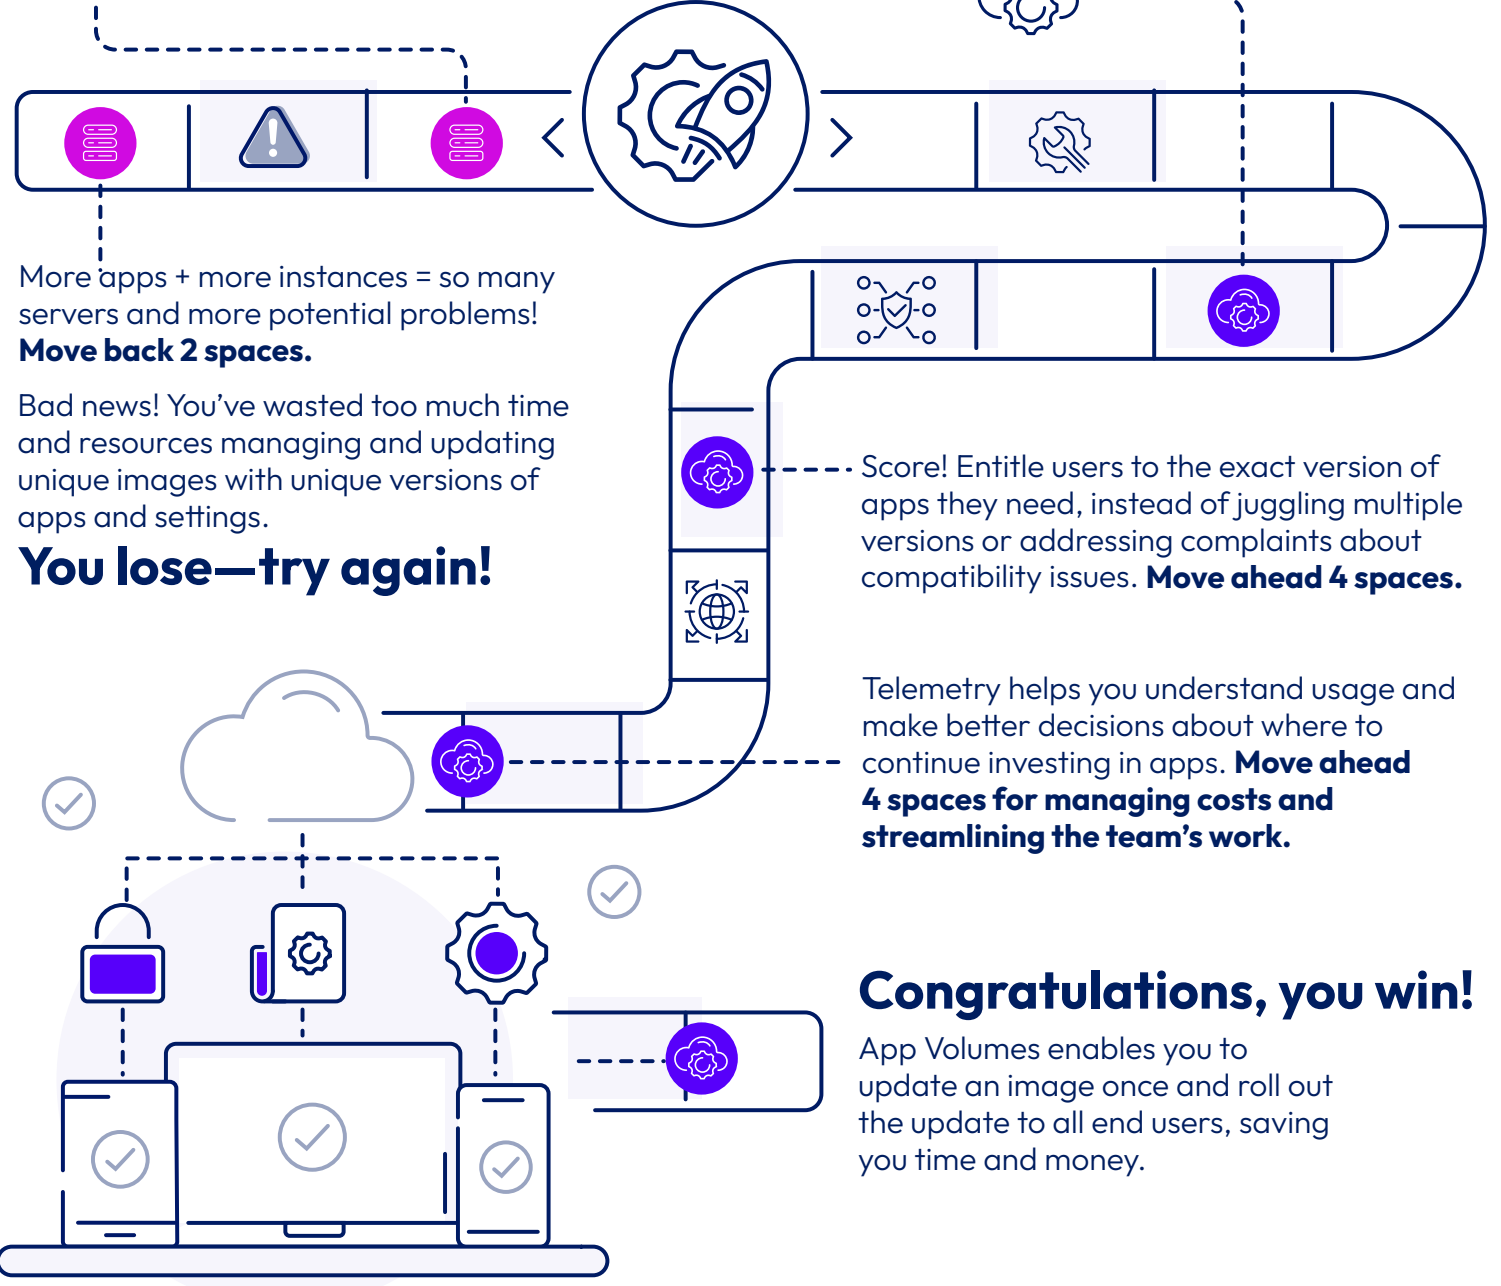

Score! Entitle users to the exact version of apps they need, instead of juggling multiple versions or addressing complaints about compatibility issues.
Move ahead 4 spaces.

Telemetry helps you understand usage and make better decisions about where to continue investing in apps.
Move ahead 4 spaces for managing costs and streamlining the team's work.

Congratulations, you win!

App Volumes enables you to update an image once and roll out the update to all end users, saving you time and money.

Get on the winning track

With simplified app and OS management, user-based entitlement management, and optimized farm infrastructure utilization, App Volumes—part of the Omnissa Platform—helps your organization win and stay ahead.
